

## HW 10

Look at the code in Update1 and explain the output. Change the code so that the *dataItem1* and *dataItem2* in the object referenced by *dobj* are always the same immediately after a thread updates both values. Put your explanation and code in a single zip or tar file called *<first name>.<last name>.zip* or *<first name>.<last name>.tar* and turn it in to blackboard.
